

SEPARATES & REMOVES

GREASE, OIL & FAT

FROM KITCHEN

WASTEWATER

Grease Guardian® Three Stage Operation System

Stage 1 Solids Collection

Wastewater from the kitchen is directed through the inlet of the Grease Guardian® where a removable strainer basket collects any solid debris.

Stage 2 Grease and Oil Separation

Grease in the wastewater floats to the surface and is trapped while the clear water leaves the unit and enters the drainage system.

Stage 3 Self Cleaning and Grease Removal

The timer-driven heating element is activated to liquefy grease, which is then removed by the skimming wheel and deposited into a portable container for recycling.
